OpenBSD is a free and open-source, security-focused, Unix-like operating system based on the Berkeley Software Distribution. Theo de Raadt created OpenBSD in 1995 by forking NetBSD. According to de Raadt, OpenBSD is a research operating system for developing security mitigations.. The system is intended to be secure by default, and many of its security features are either missing or optional in ...

OpenBSD developers, users and sponsors attend trade shows and conferences, give papers, and organize "Birds Of a Feather" (BOF) sessions. This is an opportunity to find out more about OpenBSD or just meet like-minded people.

OpenBSD: Events and Papers

There are a number of Unix-like operating systems based on or descended from the Berkeley Software Distribution (BSD) series of Unix variant options. The three most notable descendants in current use are FreeBSD, OpenBSD, and NetBSD, which are all derived from 386BSD and 4.4BSD-Lite, by various routes. Both NetBSD and FreeBSD started life in 1993, initially derived from 386BSD, but in 1994 ...

Software Monoculture. In 2003, a group of security experts -- myself included -- published a paper saying that 1) software monocultures are dangerous and 2) Microsoft, being the largest creator of monocultures out there, is the most dangerous. Marcus Ranum responded with an essay that basically said we were full of it. Now, eight years later, Marcus and I thought it would be interesting to ...
