### **PIERS 2019 in Rome**

A metamaterial (from the Greek word *meta*, meaning "beyond") is a material engineered to have a property that is not found in naturally occurring materials. They are made from assemblies of multiple elements fashioned from composite materials such as metals or plastics. The materials are usually arranged in repeating patterns, at scales that are smaller than the wavelengths of the ...

### **Metamaterial - Wikipedia**

Optical or photonic computing uses photons produced by lasers or diodes for computation. For decades, photons have promised to allow a higher bandwidth than the electrons used in conventional computers.. Most research projects focus on replacing current computer components with optical equivalents, resulting in an optical digital computer system processing binary data.
